

AKASH RUPAPARA

+1-669-268-9419 | akash.rupapara@gmail.com | [LinkedIn](#) | [GitHub](#)

Technical Skills

Programming Languages	: Java, TypeScript, C++, Go, PHP
Frameworks / Libraries	: Spring Boot, NodeJS, ExpressJS, gRPC, React, Redux, GraphQL, TensorFlow, GenAI
Databases	: MySQL, PostgreSQL, MongoDB, Snowflake, SQL
Cloud / DevOps	: AWS, Docker, Kubernetes, Terraform, CI/CD, GitHub Actions
Other Tools	: Kafka, Grafana, Victoria Metrics, Honeycomb, JUnit, Cypress, Agile, Design Patterns

Experience

Fortinet Inc. <i>Senior Software Engineer</i> - Promoted in the first promotion cycle by delivering high-impact features and surpassing expectations. - Enhancing threat detection and response capabilities for Forti-CNAPP (formerly Lacework) by building APIs and UIs for threat alerts, providing actionable insights for cloud entity compromises. - Integrating GenAI-driven analytics to surface prioritized security alerts, enabling faster and smarter threat response for enterprise cloud environments. - Collaborating with cross-functional teams to optimize distributed alert pipelines, improving performance, reliability, and customer experience.	Sept 2024 – Present <i>Sunnyvale, CA, USA</i>
Lacework Inc. <i>Senior Software Engineer</i> - Developed end-to-end security alerting system supporting 1K+ enterprise customers, contributing to \$100M) ARR, using React, TypeScript, Java, Kafka, Kubernetes, and Go in a microservices architecture. - Help develop a low-latency pipeline for threat intelligence alerts, reducing processing time from 120 min to under 5 min (P95 latency), with optimized DB queries and improved UI. - Reduced mean time to investigate (MTTI) by 35% via an alert details context panel UI and API, enabling faster analyst decision-making. - Built a Python CLI for alert throttling, cutting false positives by thousands, increasing developer efficiency, and minimizing erroneous alerts to customers. - Accelerated build times 3X for team-owned services by migrating CI/CD pipelines from Codefresh to GitHub Actions. - Earned promotion from IC3 to IC4 within 1 year by delivering scalable, testable, and high-quality solutions.	Jan 2023 – Aug 2024 <i>Mountain View, CA, USA</i>
Meta (Facebook) <i>Software Engineering Intern</i> - Facilitated full stack project by adding new view player profile feature and two other updates in screens/ functionalities with the "Fantasy Games" team in Facebook App (impact to approx 80 million users). - Increased UI interaction by 25% through improved player profiles. - Optimized app performance by 30% using pagination and efficient data loading for large screens. - Completed all project stretch goals and additional tasks, earning an exceeding expectations rating.	May 2022 – Aug 2022 <i>Seattle, WA, USA</i>
SS8 Networks Inc. <i>Software Engineering Intern</i> - Designed and maintained distributed React applications and microservices. - Optimized two core features to enhance interactivity, collaborating with UX-focused staff. - Created user-requested screen designs, fulfilling 75% of customer requests.	Jan 2022 – May 2022 <i>Milpitas, CA, USA</i>
Shriji Technoaspire Pvt Ltd <i>Software Engineer</i> - Delivered a production-ready web app for smart electric meters, achieving ~ 20% electricity savings for users. - Optimized UI with Redux and memoized selectors, improving rendering performance by 40%. - Built a regional language block-coding platform used by 1K+ high school students and teachers.	May 2019 – Dec 2020 <i>Gandhinagar, Gujarat, India</i>

Projects

Indeed-Clone MERN Stack, REST APIS, Redux, Redis, Kafka, Docker, MongoDB, AWS, GraphQL   - Collaboratively developed a distributed system using micro-services for job board used for employers, job seekers and administrative roles; deployed this application on EC2 instance and stored images in S3 bucket. - Reduced latency by 12% using data-pooling available in MongoDB to allow for multi-threaded connections re-use. - Integrated caching via Redis to refine throughput and reduce latency, along with message broker (Kafka) to achieve API request scalability and reliability while supporting 10K users; tested the application via JMeter and Mocha.	
Vaccine Management System ReactJS, REST APIs, Java Spring Boot, AWS, MySQL  Colloborated with 4 people team to create a system used by 20K+ users to book and manage vaccination appointments, with admin-managed clinics.	

Awards and Publications

- 100% Scholarship** for Undergraduate Studies at Ahmedabad University based on merit.
- IEEE Publication:** “Advanced Assistance Services Using Hybrid Ambulance System”, reducing ambulance response times by ~ 3min with **97% survival rate**.
- Earned early promotion at Fortinet & Lacework **Twice** for delivering high-impact engineering solutions during first cycle.

Education

Master of Science in Software Engineering <i>San Jose State University</i> Relevant Coursework: Enterprise Distributed Systems, Data Mining, Enterprise Software Platforms, Machine Learning	Jan 2021 – Dec 2022 <i>San Jose, CA</i>
Bachelor of Technology in Information and Communication Technology <i>School of Engineering and Applied Science, Ahmedabad University</i> Relevant Coursework: Advanced Data Structures and Algorithms, Software Engineering, Big Data Analytics	Aug 2016 – May 2020 <i>Ahmedabad, Gujarat</i>
